ENHANCE YOUR BUSINESS WITH COPILOT

INTEGRATE YOUR GENERATIVE AI PROJECT WITH OUR EXPERTS

Create a deployment plan that matches the readiness level of your organization

Like any new technology, deploying artificial intelligence requires careful planning. Our experts assist you in implementing Microsoft Copilot through initial analysis, the implementation phase, and the development of a strategic roadmap. They ensure that all technical requirements are met to guarantee the optimal and secure operation of Microsoft Copilot.

In-depth analysis

A comprehensive audit of your Microsoft 365 environment concerning the prerequisites of Microsoft Copilot helps identify opportunities for optimization regarding data accuracy. This audit also addresses potential challenges in integration and adoption of Microsoft Copilot, as well as evaluating existing policies, processes, and data classification.

Proof of concept

To ensure the effective adoption of Microsoft Copilot by your users, we implement a pilot configuration followed by testing and a training session.

Detailed roadmap

We develop a customized roadmap for the full adoption of Microsoft Copilot, including recommendations tailored to your organizational needs to maximize the use of the solution.
